

Interaction Log: Playwright SUT Automation Testing

I used AI for the following tasks:

Interaction ID: 1

- **AI Tool:** Antigravity
- **Date & Time (Local):** 2026-08-15T22:37:38+07:00
- **Target Feature:** FR-01: Đăng ký tài khoản

Prompt:

```
@playwright-hw04-generator
Target Feature: FR-01: Đăng ký tài khoản
Student ID: 23127108
```

Instructions:

1. Inspect SUT source code.
2. Create tests/data/FR01.json with 12 test cases in Vietnamese.
3. Generate tests/FR01.spec.ts using dynamic loops, at least 100 lines.
4. Check discrepancies against specs; flag deviations as they occur.

AI Output (Summarized):

- Completed static code analysis of Register.jsx and backend server.js.
- Created tests/data/FR01.json with 12 positive, boundary, and negative test cases.
- Generated tests/FR01.spec.ts featuring Playwright E2E

tests, 3 distinct assertions (URL matching, Element visibility, and HTML5 Validity state evaluation), and student ID metadata annotations.

- Identified and reported discrepancies (missing confirm password input, flawed regex pattern requiring spaces and blocking special characters).
 - Executed the test suite in Chromium, Firefox, and Webkit; successfully flagged all implementation defects.
-

Interaction ID: 2

- **AI Tool:** Antigravity
- **Date & Time (Local):** 2026-08-15T22:56:02+07:00
- **Target Feature:** FR-07: Giỏ hàng (Shopping Cart)

Prompt:

```
@playwright-hw04-generator
Target Feature: FR-07: Giỏ hàng (Shopping Cart)
Student ID: 23127108
```

Instructions:

1. Inspect SUT source code.
2. Create tests/data/FR07.json with 12 test cases in Viet
3. Generate tests/FR07.spec.ts (corrected filename matchi
4. Check discrepancies against specs; flag deviations as

AI Output (Summarized):

- Completed static analysis of cart components (Cart.jsx, CartContext.jsx, ProductDetail.jsx).
- Created tests/data/FR07.json with 12 test cases covering empty states, quantities, row merging, "+/-" buttons, deletion dialogs, and navigation.
- Generated tests/FR07.spec.ts using client-side SPA navigation to preserve React state.

- Identified and logged 6 major SUT defects (missing "+/-" buttons, failure to merge duplicate rows, missing deletion confirmation dialog, incorrect "Tổng tạm tính" label, incorrect column header, and click-twice requirement on product detail).
 - Executed tests (12 passed, 24 failed due to expected SUT deviations).
-

Interaction ID: 3

- **AI Tool:** Antigravity
- **Date & Time (Local):** 2026-08-15T23:29:27+07:00
- **Target Feature:** FR-13: Dashboard

Prompt:

```
@playwright-hw04-generator
Target Feature: FR-13: Dashboard
Student ID: 23127108
```

Instructions:

1. Inspect SUT source code.
2. Create tests/data/FR13.json with 12 test cases in Vietnamese.
3. Generate tests/FR13.spec.ts using dynamic loops, at least 10 dynamic data points.
4. Check discrepancies against specs; flag deviations as bugs.

AI Output (Summarized):

- Inspected admin dashboard implementation inside adminApp.jsx.
- Created tests/data/FR13.json with 12 test cases for revenue, order counts, login authentication, and logout validation.
- Generated tests/FR13.spec.ts featuring dynamic tests, admin login handling, and automated SQLite database seeding before each test run.
- Pinpointed and flagged a major SUT bug where total delivered revenue is incorrectly multiplied by 2.

- Executed tests across Chromium, Firefox, and Webkit (27 passed, 9 failed due to SUT's revenue doubling defect).
-

Human Audit

- Đã sửa một số test case của FR13
- Bỏ phần ISO timestamp trên test.describe của mỗi file spec.ts
